

# DataArchiver

Purge legacy records to improve performance. Archive to IBM i or other formats including SQL, Access or Excel

“ Archiving without downtime is a reality. We can process multiple files in one step at double the speed of our previous methods. Performance on our IBM i has improved and we have released valuable disk space, while at all times protecting data integrity. ”

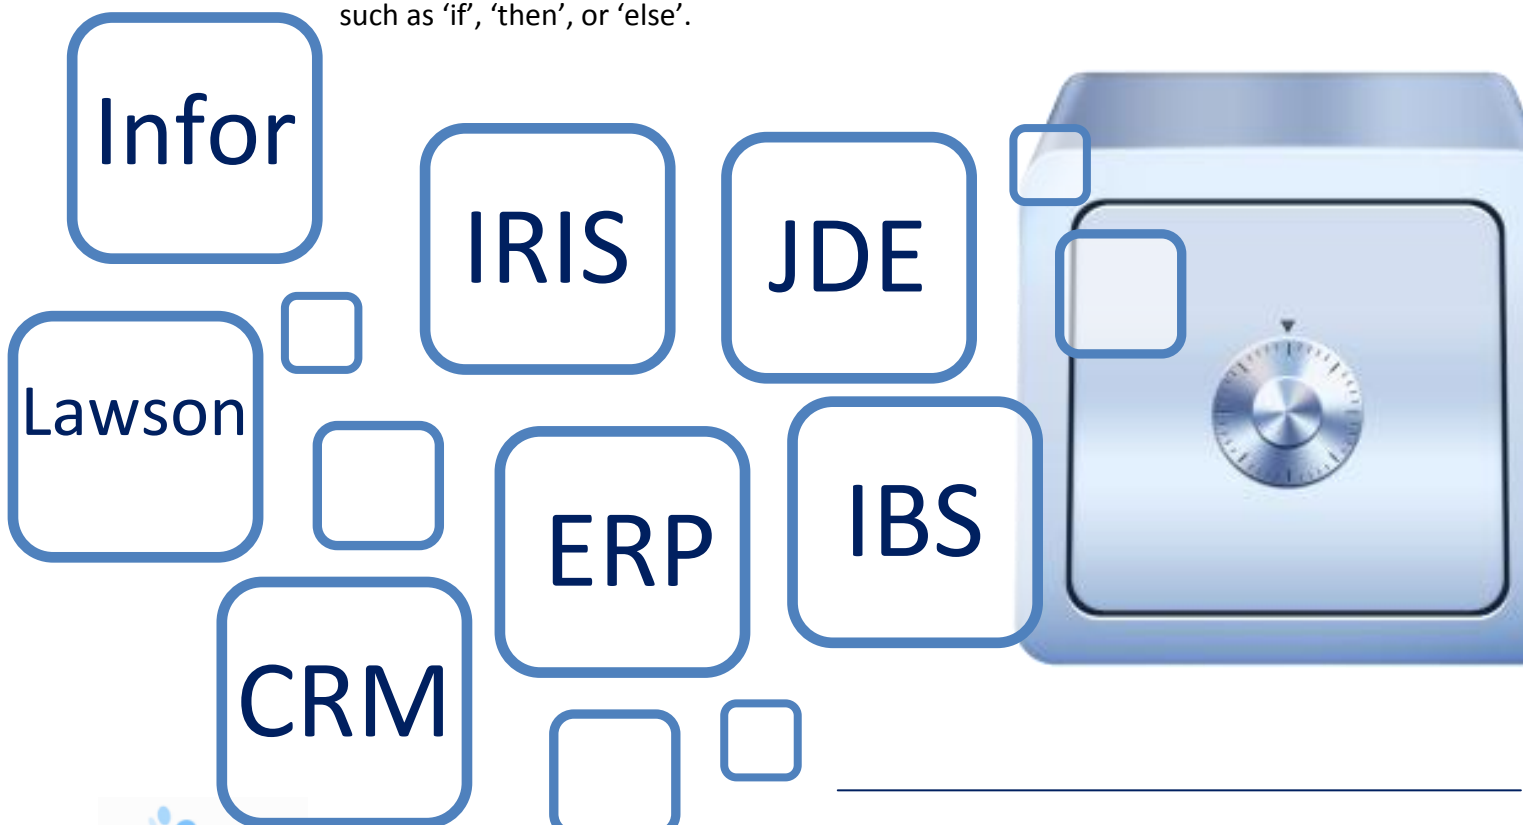

## Archive in Safety without down-time

DataArchiver in conjunction with RouteOne allows for the safe archive of IBM i database records to multiple locations and multiple formats of your choice.

- Formats include, SQL, Access & Excel
- Data is visible without the need to restore to IBM i
- Purge unwanted data to improve performance
- Process archives while working on enterprise solution; no down-time
- Rapid file transfer, up to five times as fast as ODBC methods

Built to address the most demanding challenges of data growth, DataArchiver solves your performance and compliance with its automated, rules based archiving and purging technology. The powerful logic engine allows you to set up rules for archive such as 'if', 'then', or 'else'.

Security with speed describes the archiving methodology. DataArchiver's rapid technology allows for data transfer quicker than conventional technologies whilst adding an additional layer of security through purging rules.

## Safe and Secure. Improve Performance and Archive with Confidence.

### Confidence

DataArchiver enables any IBM i system administrator with an understanding of the enterprise database to build archive instructions without the need for programming. Multiple archive processes can be built and run in tandem. Various business rules and filter criteria and can be built to conduct automated and managed archival operations as per predefined schedules.

### Security

DataArchiver can be configured to use the latest in secure FTP (SFTP) and secure socket layer (SSL) technology. Using data connection encryption, DataArchiver ensures that data integrity is maintained and confidentiality protected.

### Performance

Performance can be radically improved through the clean-up of unnecessary data. DA can help reduce redundant, cold files use on your IBM i to improve performance and increase disk space.

### RouteOne

DataArchiver harnesses the power of RouteOne, the long established powerful rules based engine.
